

Food waste disposal

Hygiene specialists

Reconomy Connect's food waste management service will ensure your organic waste is correctly disposed of, in compliance with the best possible hygiene practices.

Our goal is to create a cleaner and more environmentally-friendly working space for you and your colleagues by disposing of your food waste quickly and efficiently. We have experience developing waste management strategies across numerous industries, including:

- Restaurants and cafés
- Office canteens and kitchens
- Shopping centres
- Hotels and hospitality venues
- Temporary canteens placed on construction sites.

In addition to the supply and scheduled collection of wheelie bins and other food waste containers, we also offer a range of on-site organic waste disposal solutions. These can help you minimise the space needed for food waste, improving your carbon footprint and landfill diversion, as well as making long-term financial savings.

Unique benefits

Nationwide delivery

Our outsourced approach gives us access to a network of over 1,000 regionally-based supply partners and service providers. We can therefore meet your needs no matter where you are based within the UK mainland.

Price leadership

We proactively negotiate prices with all our supply partners and service providers on your behalf, so you can be confident that you're getting value for money.

Single point of contact

Placing an order with Reconomy Connect couldn't be easier. We will even assign a single team within the company to handle all your projects and sites nationwide.

Industry expertise

Our 300+ team of waste management professionals have years of experience to call upon. We will ensure your waste is disposed of safely and in the most environmentally-friendly way possible.

On-site support

Our team of Contract Managers will act as your on-site eyes-and-ears to help minimise the amount of waste you create and optimise your disposal methods.

Data collection

Collate and monitor all your waste data, including tonnages, landfill diversion statistics and more on the Reconomy Connect Portal – the waste industry's leading online reporting platform.

Waste dryers

Our food waste drying systems process catering waste and packaged food waste, converting it to valuable biomass and recyclables.

These automated, heavy-duty systems expose food waste to high temperatures, removing any moisture and outputting an inert, sanitised and odourless powder.

Features include:

- Reduces the weight and volume of food waste by up to 90%
- Biomass output can be used for on-site energy generation
- Available in a range of sizes capable of processing 50kg to 200 tonnes per day
- Batch processing times range from 5 hours to 7 hours
- Minimises food waste storage requirements.

Compactors

Designed to recycle organic waste from site catering or food services, our extensive range of composters produce compost from your food or garden waste in 14 days.

Each composter works on a 'continual flow' system, producing compost daily as more waste is added. **Features include:**

- Robust, reliable and easy to use
- Available in a range of capacities that can process between 300 and 10,500 litres of organic waste per week
- Minimises food waste vehicle collections and transport costs
- Requires a single-phase power supply and a covered area to house the composter for simple set-up.

Waste compactors

All our food waste compactors are fitted with leak-resistant seals as standard, removing the risks of seepage and the subsequent attraction of vermin.

Available in various sizes and colours, and each supplied with easy-to-follow instructions. **Features include:**

- Self-cleaning and leak-free design
- Compaction force of up to 20 tonnes
- Fast cycle times
- Significantly reduces the volume of your food waste
- Minimises vehicle collections and transport costs.

Waste de-waterers

We offer a range of de-waterers to reduce the volume and weight of food waste, whilst recovering the reduced, de-watered solids for collection and disposal.

Capable of processing up to 700kg of waste per hour, each system is fitted with a self-cleaning mechanism to avoid blockages. **Features include:**

- Reduces the volume of waste by up to 80%
- Reduces the weight of waste by up to 50%
- Recovers over 90% of solids
- Reduces storage, collection and disposal costs
- Can be retrofitted to existing waste disposal systems.
